

Where does drinking water go?

Drinking water starts as snow in the mountains. Snow melts into rivers that flow to Folsom Lake.

Folsom Lake water is piped to the drinking water treatment plant to be cleaned. Clean water is piped to our homes, ready to drink!

Where does trash go?

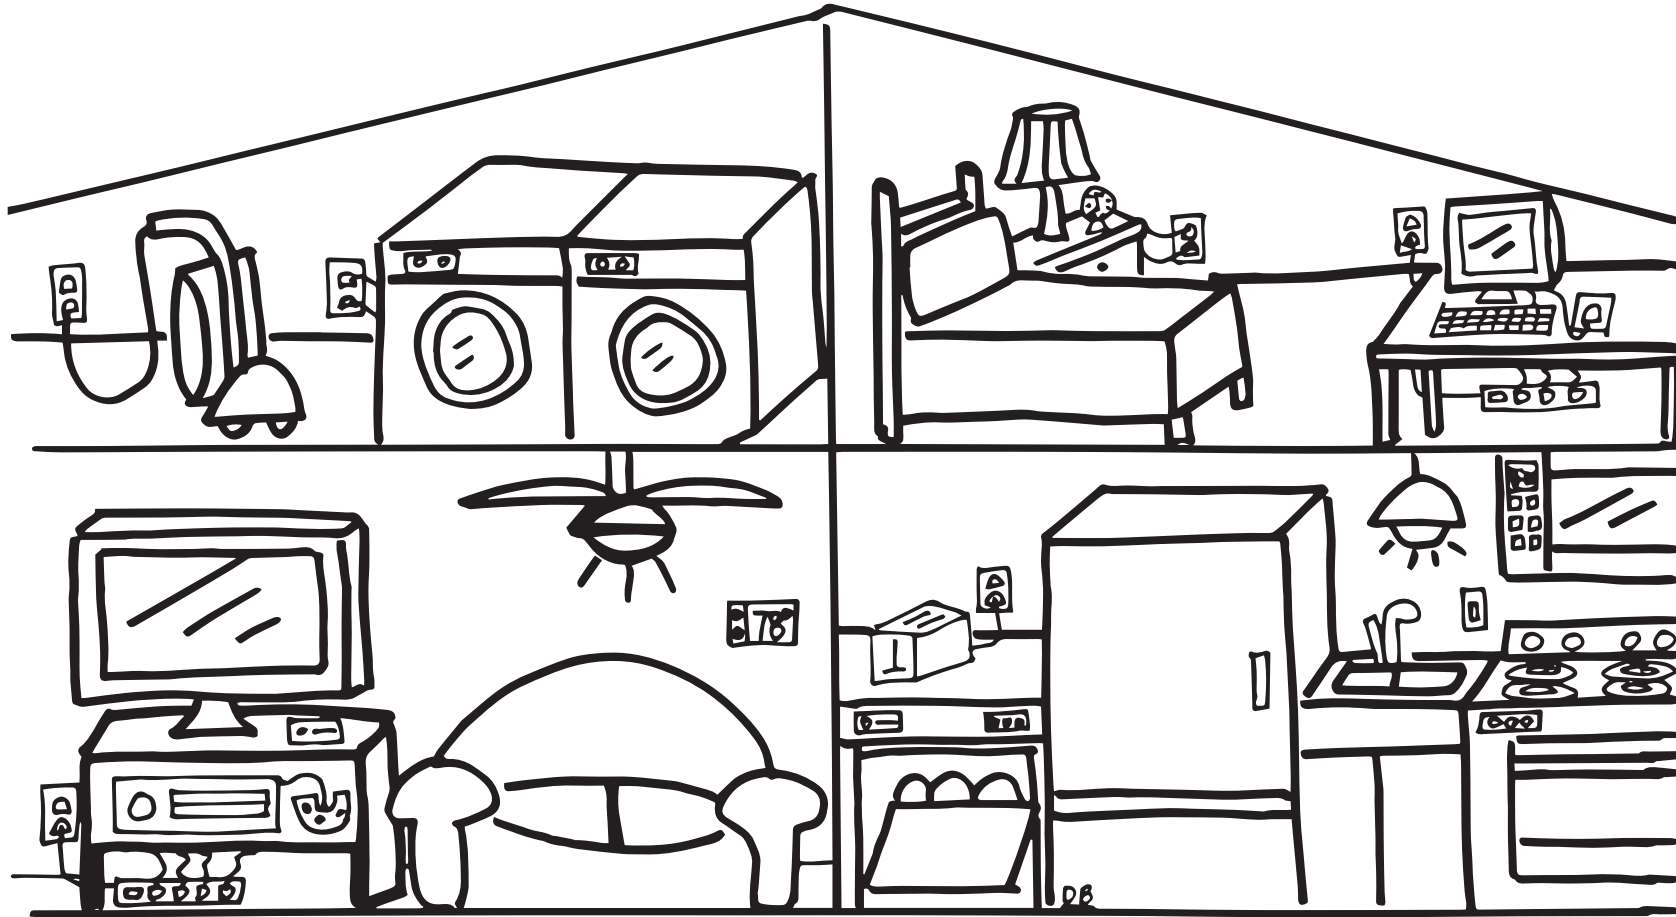

Garbage trucks take trash to the Materials Recovery Facility (MRF).

Workers at the Materials Recovery Facility sort recyclables.

What doesn't get recycled goes into the landfill.

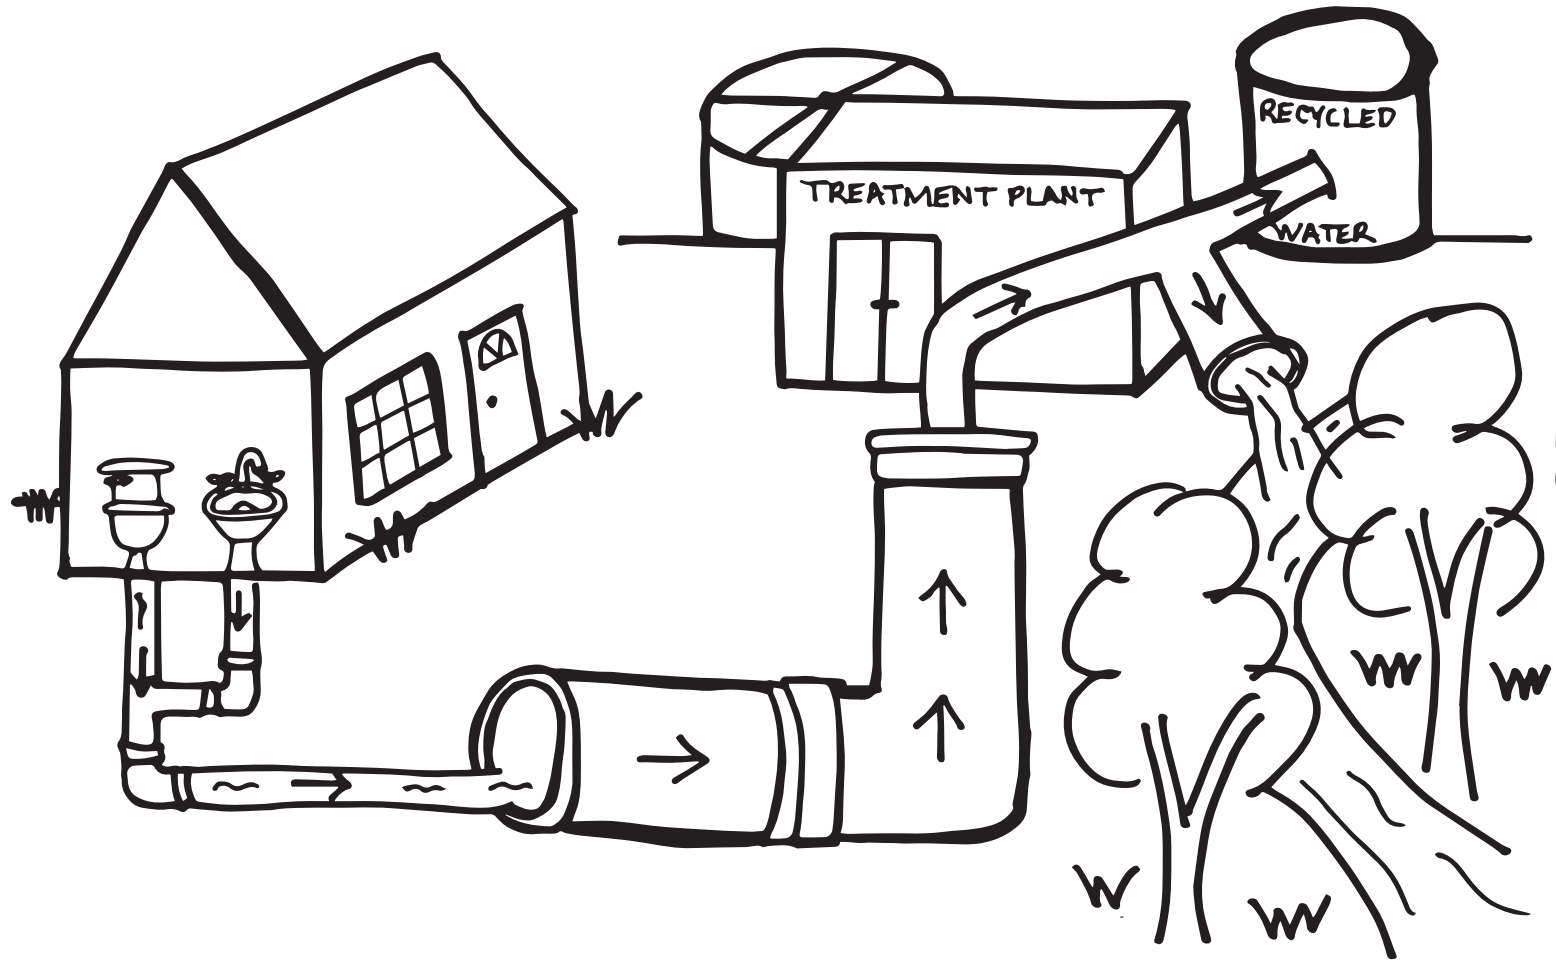

Have you used electricity?

Can you find all the things in the house that use electricity?

Can you think of ways that you can save electricity at home?

What happens when I flush?

Whoosh! Water travels down our toilets and sinks through the sewer. Then the water goes to the treatment plant to be cleaned.

Recycled water goes through purple pipes to water grass and trees. Treated water also goes to nearby creeks.

Where does stormwater go?

Water that goes into the storm drain flows into our creeks.

You can help keep our creeks clean.
Only rain in the drain!
